1.0 INTRODUCTION

ClickDoc is an AI-powered web application designed to help developers and teams easily generate, analyze, and understand their code documentation.

With ClickDoc, users can upload their source code files and instantly generate structured documentation, visualize code relationships, and interact with an intelligent document-based chatbot for better code understanding — all through a simple, web-based interface.

This User Guide provides clear instructions on how to use each feature of ClickDoc, including file uploading, documentation generation, chatbot interaction, and diagram visualization.

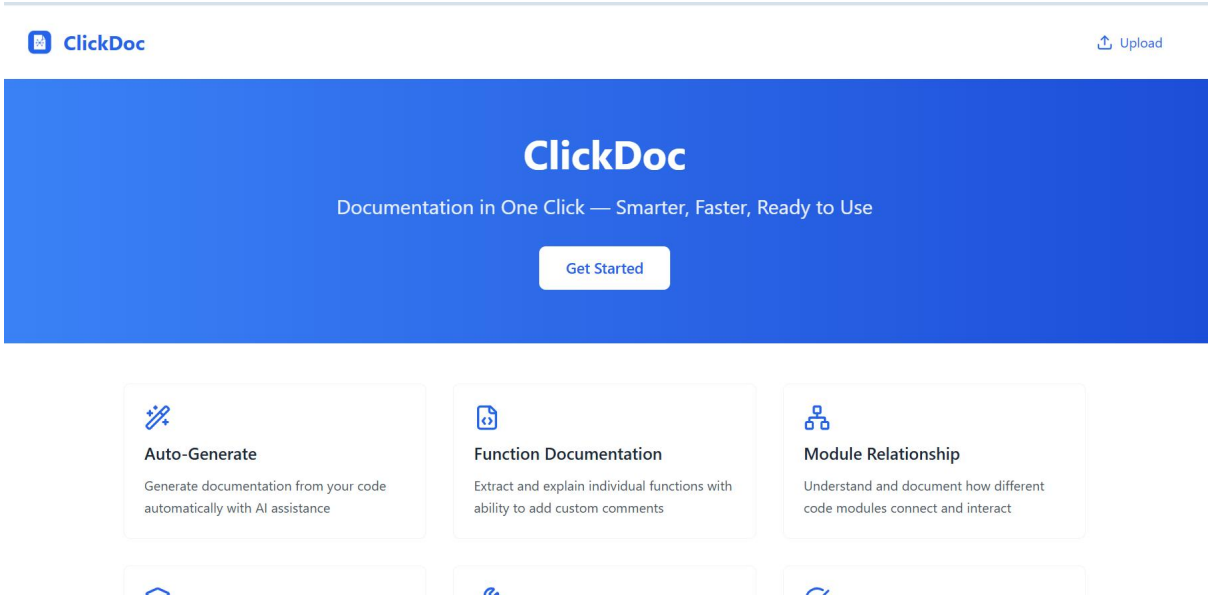
2.0 GETTING STARTED

Step 1 : Access the Website

Open your web browser and go to:

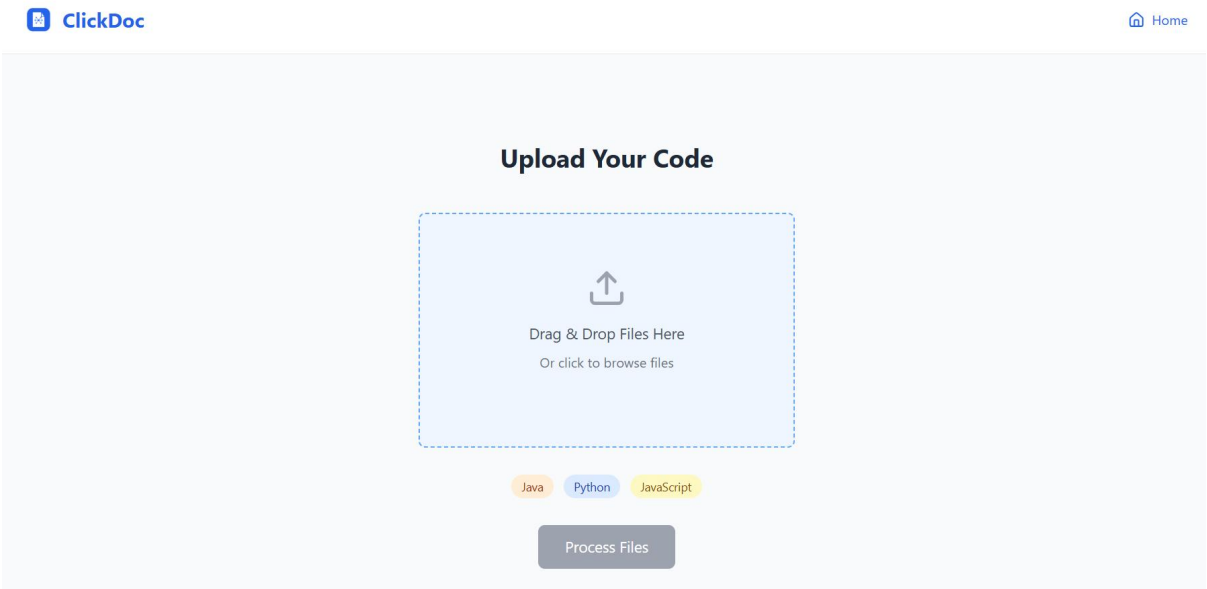
🔗 https://clickdoc.onrender.com

You'll arrive at the **Home Page**, which gives you a quick overview of what ClickDoc does.



Step 2 : Click "Get Started"

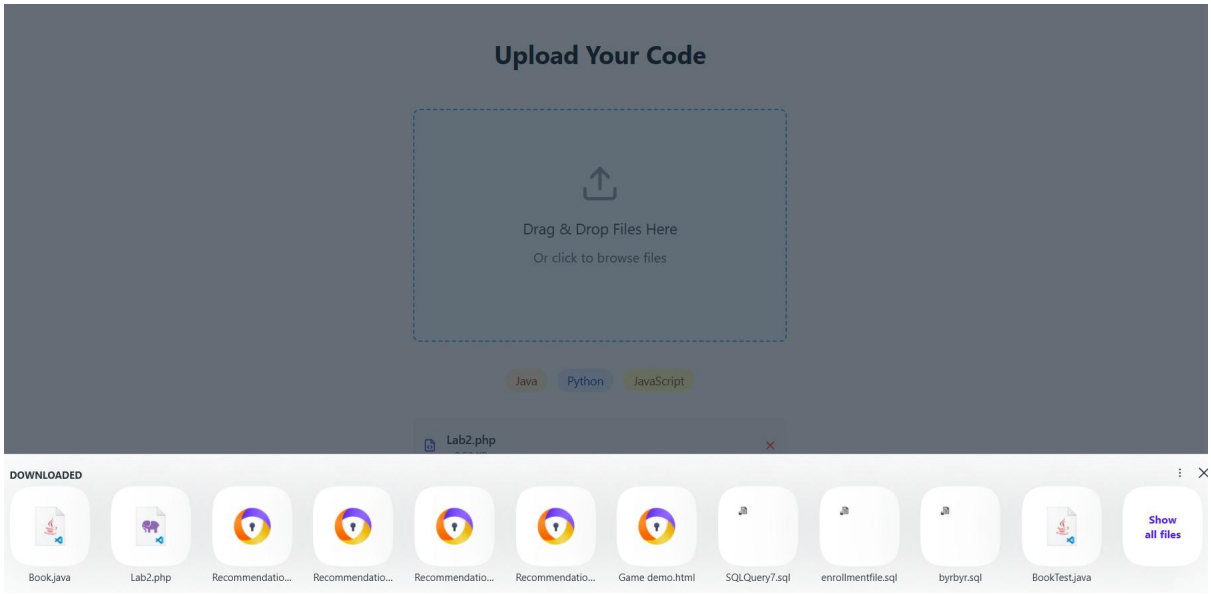
On the home page, click the "Get Started" button. This will take you to the File Upload page where you can begin your documentation process.

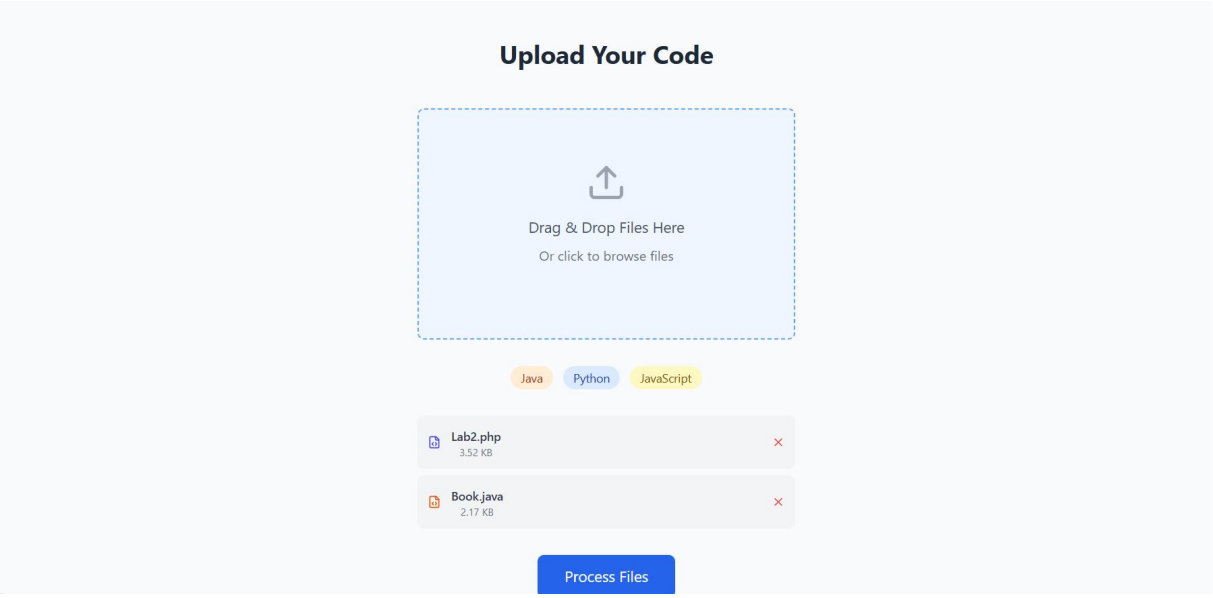


Step 3 : Upload Your File

Click the “Choose File” button. Select your source code file (e.g., .py , .txt, .java, .php format). Click “Upload” to continue.

Note: Only text-based files are supported. Uploading non-text files will show an error message.

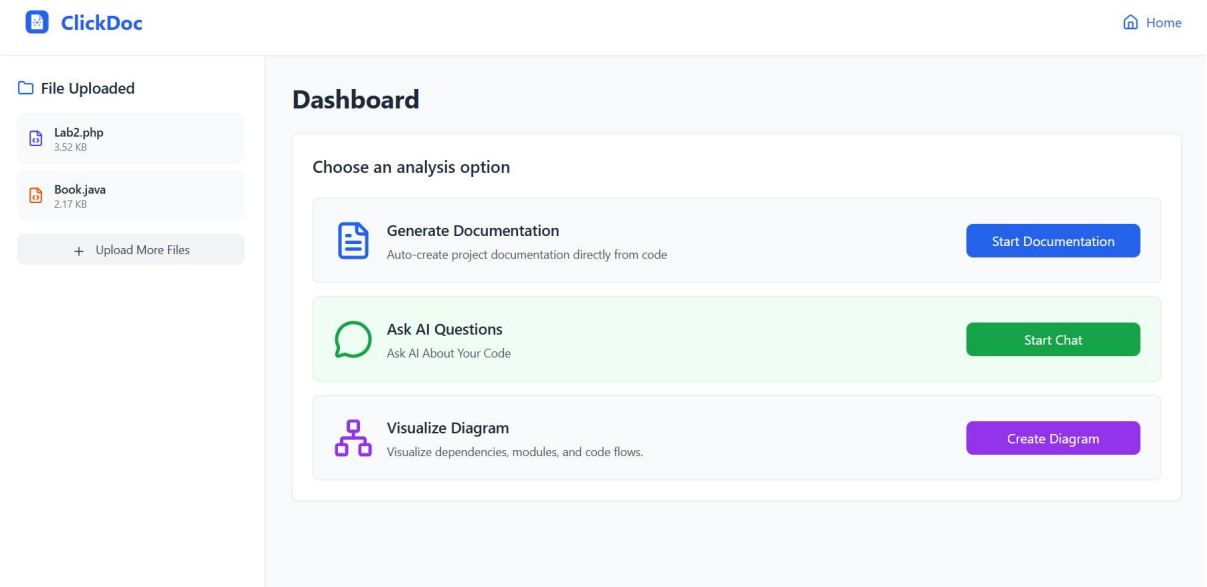




Step 4 : Redirect to Dashboard

After uploading, you will be automatically redirected to the Dashboard. From here, you can access various features such as:

- Generating AI-based documentation
- Interacting with the document-based chatbot
- Creating diagrams and visualizations



Step 5: Start Exploring

Once the dashboard is loaded, you can begin analyzing your uploaded code and using the available tools to generate documentation, visualize relationships, or chat with the AI assistant.

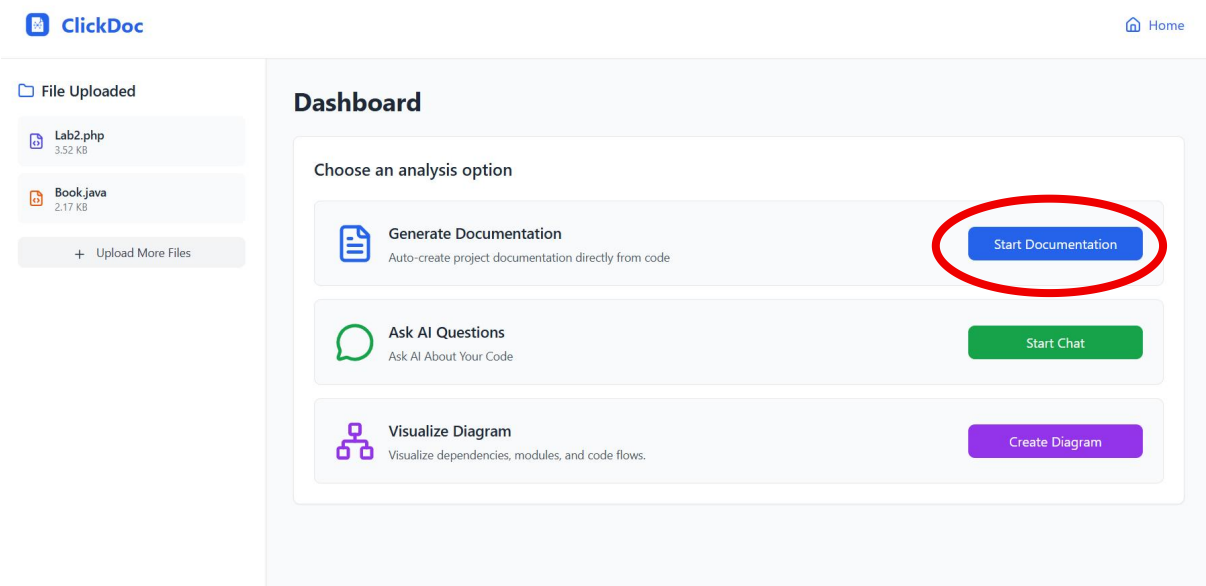
Note: *You can also upload new files anytime from the* ***sidebar*** *on the dashboard — no need to return to the home page.*

3.0 MAIN FEATURES AND HOW TO USE THEM

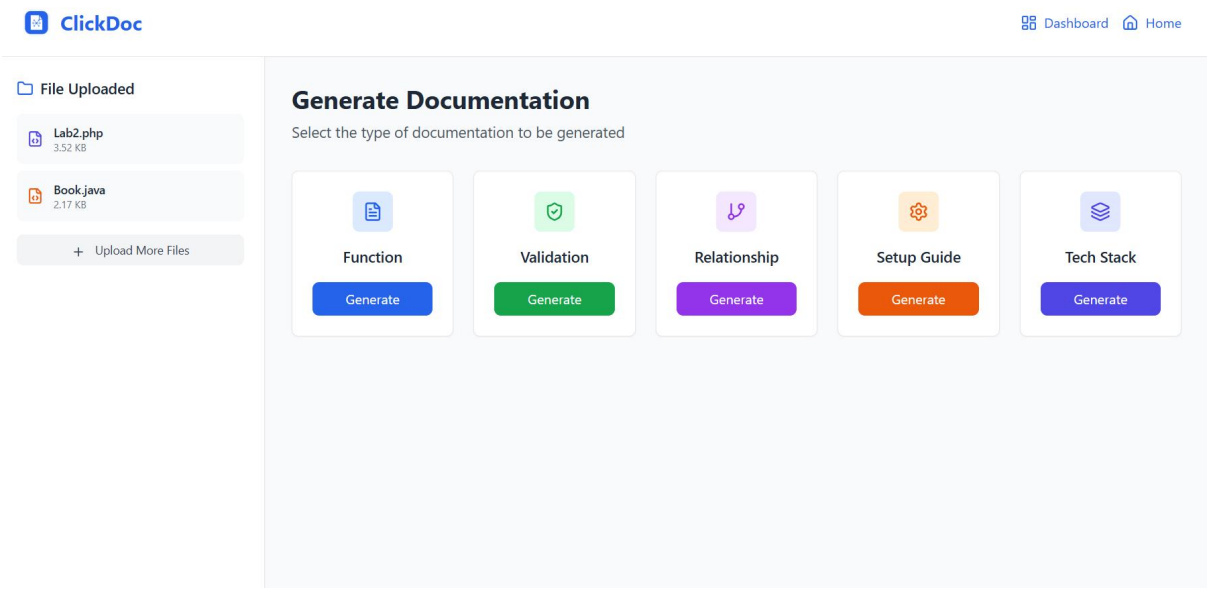
Our system is designed to be simple and user-friendly. Here's how you can use each main feature:

3.1 Function Documentation

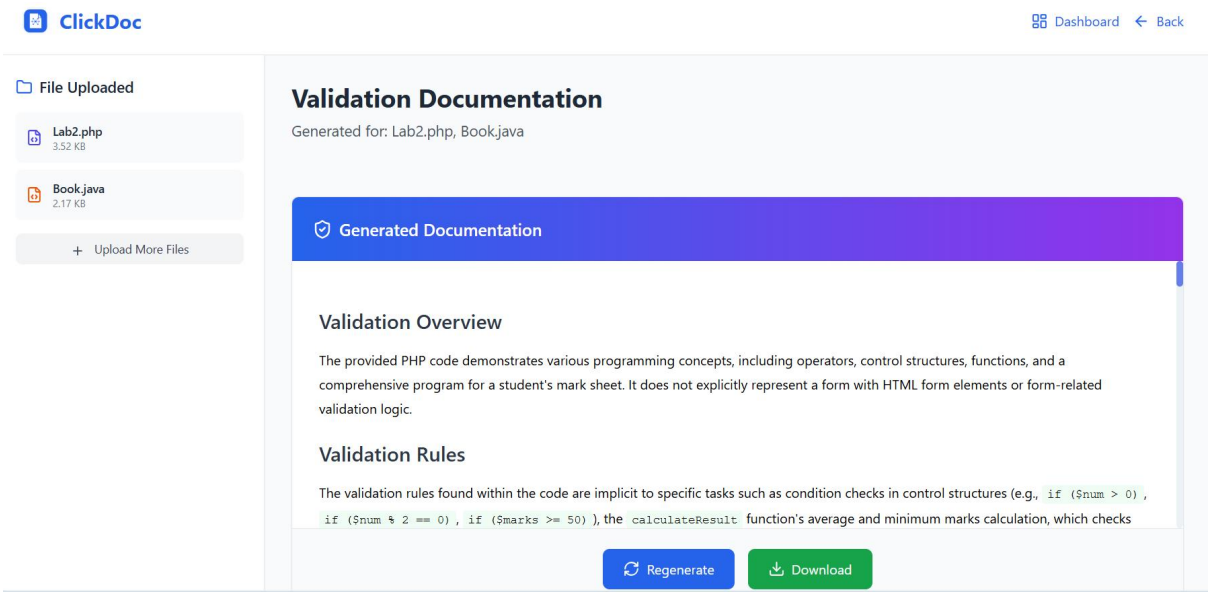
1. On the dashboard, click **"Generate Documentation."**



2. Select the type of document you want to generate.



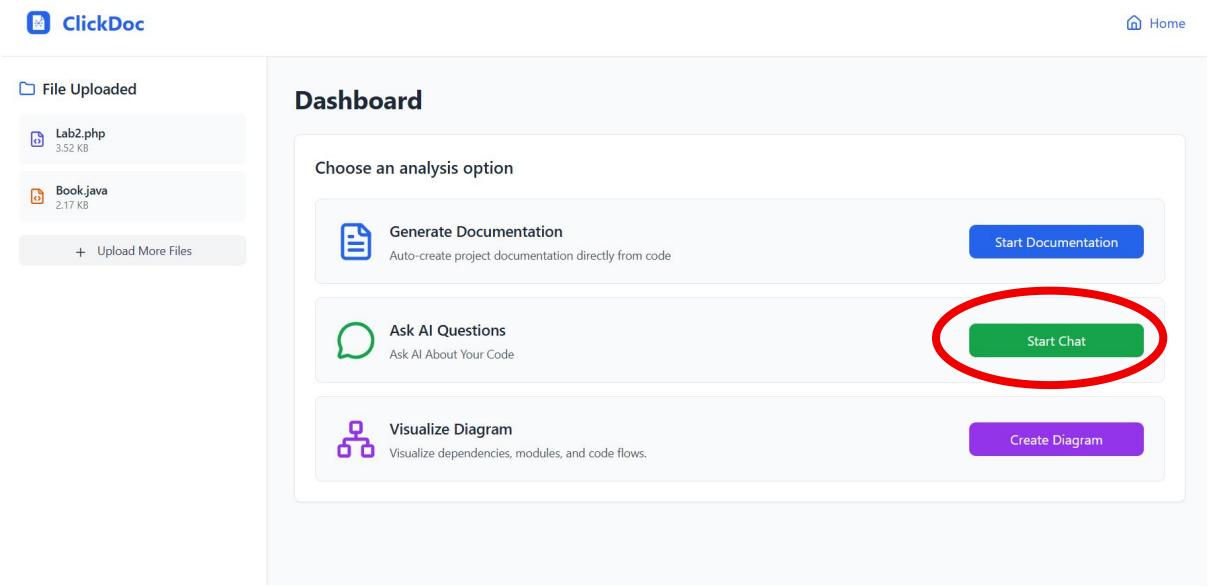
3. Click **Generate**, and the system will automatically create structured, easy-to-read documentation for you.



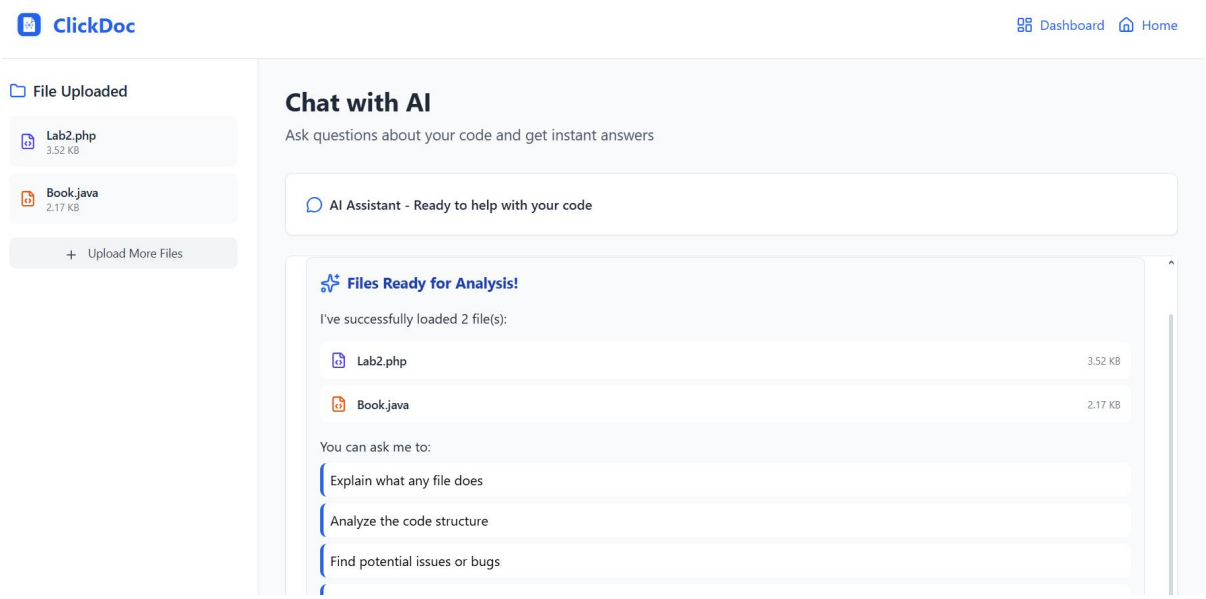
If you're not satisfied with the result, click **Regenerate** to produce a new version instantly. Once you are happy with the result, you can **Download** your documentation for later use.

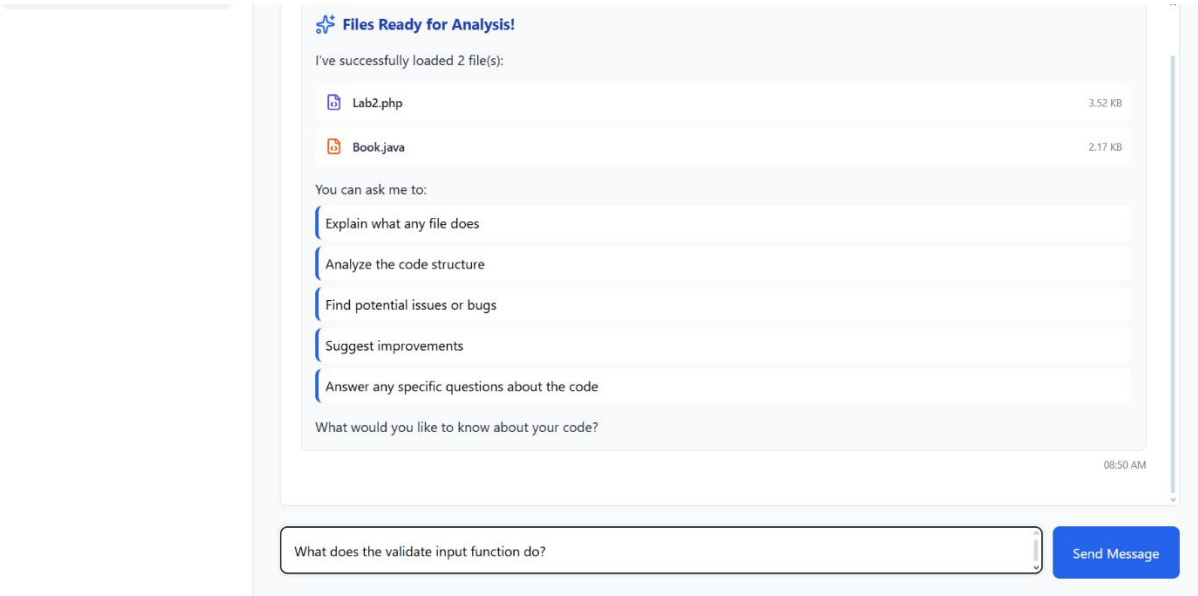
3.2 Document-Based Chatbot

1. Click on **Chatbot** in the sidebar to open the chatbot interface.

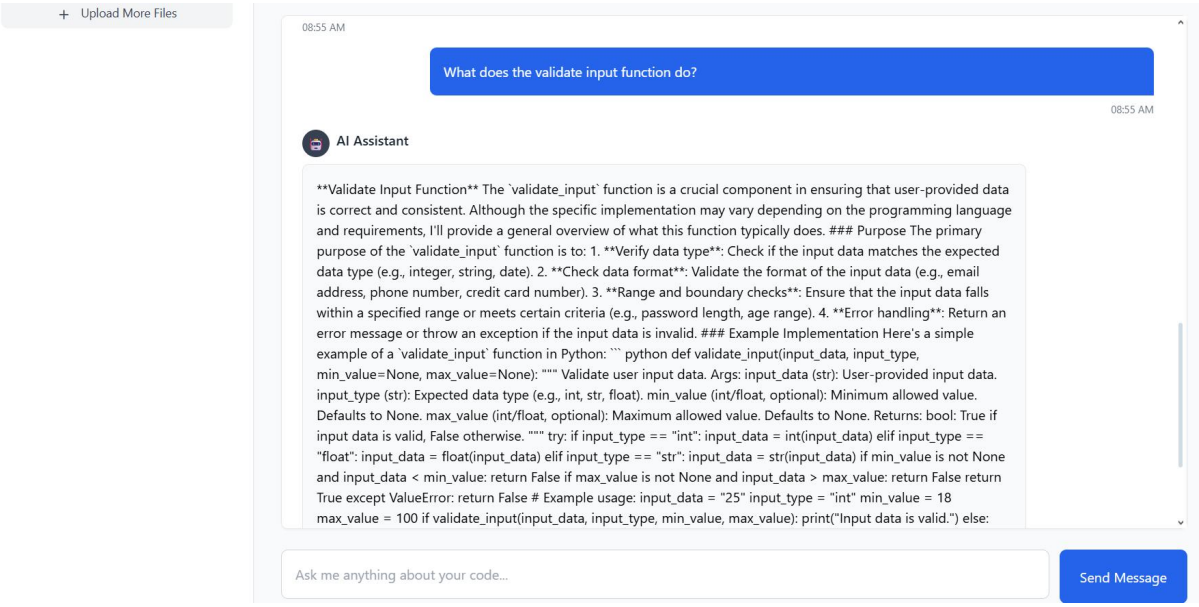


2. Start typing your question. For example:“ What does the validate input function do?”





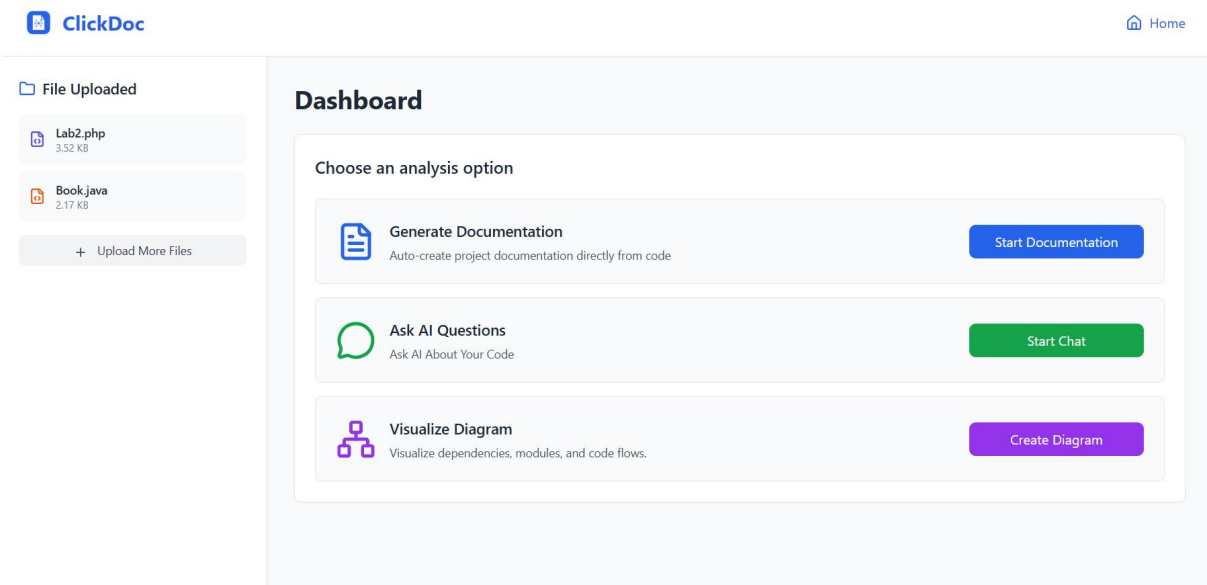
3. The chatbot will analyze your uploaded document and respond based on your code content.



3.3 Diagram Generator

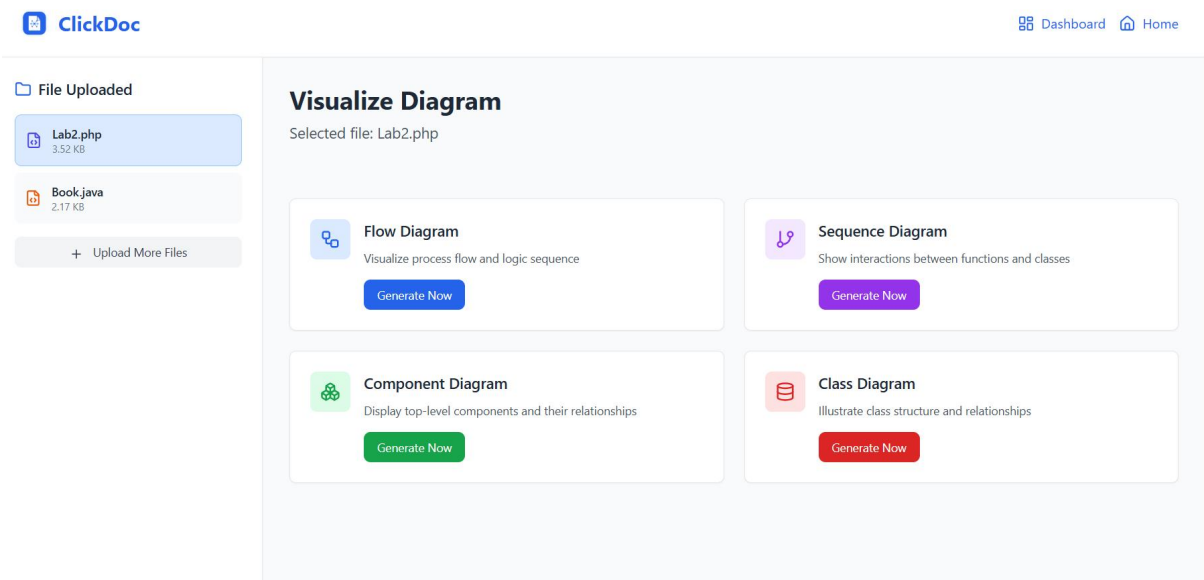
Visualize your project structure with just one click!

1. Click on **Diagram** in the sidebar.

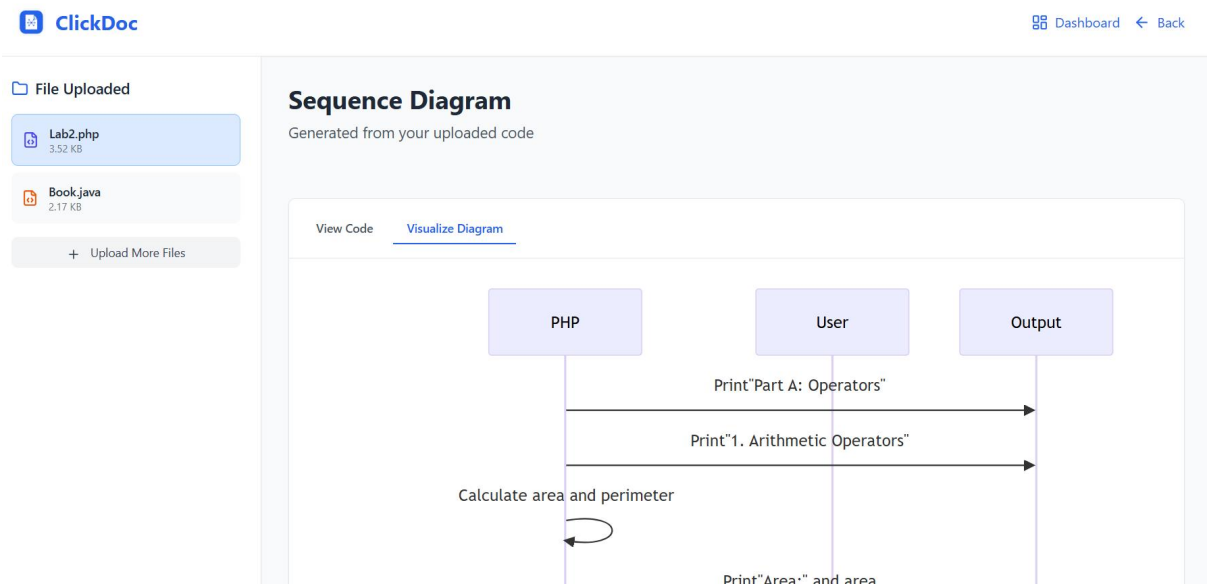


2. Select the file you want to and choose the type of diagram you want to generate such as **Flow Diagram**, **Sequence Diagram**, or **Component Diagram**.

   Note: Each file in here is processed individually, so you can focus on specific parts of your project as needed.



3. Click **Generate**, and your diagram will appear instantly.



You can:

- **Regenerate** diagrams until you're satisfied with the visualization.
- **Download** the diagram as an image file for reports or presentations.
- Use **Generate All** to create diagrams for all your uploaded files at once.

4.0 TROUBLESHOOTING

If you encounter any issues while using the system, try the following steps:

1. **Refresh the page**: Sometimes reloading helps reset the session.
2. **Check your internet connection**: Make sure you are connected before uploading files or generating results.
3. **Re-upload your files** : If the system fails to process your files, try uploading them again.
4. **Clear browser cache** : This can help fix loading or display issues.
5. **Try a different browser**: Recommended browsers are Chrome, Edge, or Firefox.

If the problem still persists, please contact **Jasmine Tang** at **012-367 4851** for assistance.

5.0 ACKNOWLEDGEMENT

We would like to express our sincere gratitude to everyone who contributed to the development of **ClickDoc**, including our mentors, teammates, and testers with their valuable guidance and support.

Special thanks to the technologies and tools that made this project possible, including:

- **React.js** for building a dynamic and responsive interface.
- **Flask** for powering our backend services.
- **Groq** for enabling smart, context-aware AI responses.
- **Mermaid.js** for generating visual diagrams with ease.
- **Render** for hosting and deploying our application.

6.0 USER FEEDBACK

We value your feedback to help us improve the system. Please share your thoughts and suggestions by filling out the **User Feedback Form**.
